Graduate Design Engineer – Job Description

This is a permanent position for a well-presented outgoing person with good communication skills to work as a Graduate Aerospace Designer. The candidate will have achieved a 2:2 level or higher qualification in a suitable Aerospace / Aeronautical Engineering or Mechanical Engineering Degree. On the job training will be provided with a view to progressing within the company and achieving signatory status. You will be responsible for your own time management and expected to work on your own as well as being an active team member. Rudimentary experience of aircraft systems is preferred.

The job is fast-paced with daily deadlines and direct customer interaction in the ever expanding environment of civil aircraft modifications and certification.

The position involves designing modifications for integration of structural / electrical systems (Seats, Monuments, IFE etc) as well as the associated structural provision onto commercial aircraft. This includes producing engineering drawings, accomplishment instructions and associated test and certification reports.

You will be working with AutoCAD and Microsoft Office applications and need to be computer literate in word-processing and spreadsheet applications.

The candidate must have a clean full UK driving licence and UK passport.

Additional information
